---

We are beginning to create the agenda for the Sept. 30th Santa Susana Mountain Area Committee.

Can you help us with a presentation:

1. Defining the three types of radiation (alpha, beta & gamma)
2. What are their effects on people, animals & plants? Are they dose-related?  
- external application and internal application
3. What nuclides (found at SSFL) produce radiation? How much was present?

You haven't confirmed or described the TASC program and this might become the first TASC presentation.

We look forward to your ongoing participation in SSMAC.

Thank you,

Daniel Wiseman

**Subject:** EPA and TASC

Dear Craig, Nicole, David, Luis, and Dr. Wiseman,

I spoke to Dr. Wiseman today. He says that he has submitted a request for the TASC team to assist the WHNC on certain issues. I am confirming that.

Dr. Wiseman would like the EPA if possible to be at the SSMAC meeting on September 30th. He feels that someone needs to explain radiation - the different spectrums and sources.

<http://en.wikipedia.org/wiki/Radiation>

He wants someone to explain the different kinds of radiation, how much is associated with health risk. He wants someone to explain the sources of radiation at this site - actually the radionuclides that you will be sampling for. And then what are their half lives?

We hope that you can bring in people to help us with this. There is so much alarm going on in the community.

The DOE presentation relieved some of the alarm for me. But I do not know how it affected others.

Thanks!

*Chris*
